Rasmi Lamichhane | Résumé

Education

The University of Colorado, Boulder

Bachelor of Computer Science 2012-Current

Experience

University of Colorado Boulder ATLAS

Boulder, CO

Student Android Developer

Fall 2016-Present

Developing Android Application.

University of Colorado Boulder Libraries

University of Colorado Boulder Libraries

Boulder, CO

Student Assistant Digital Lab

Fall 2015-Fall 2016

Digitaling different kind of archival material and processing it.

Boulder, CO

Student Assistant LIT

Summer 2015

Web help desk, Troubleshooting software and hardware problems, image computer, printers problems and etc.

Computer Skills

Language: C/C++, Python, Java, HTML/CSS, Mathematica, SQL, Bash Shell Scripting, Regex

Tools: Unit Testing, Pair Programming, Rest and Soap, Agile/Scrum methodology, Waterfall, Databases

Extra: Github, Adobe Photoshop, Freehand, Microsoft Office

Projects

Sparki Pill Pusher https://git.io/v64Lp

o Sparki follows specified paths to fetch 1 of 5 bottles.

https://youtu.be/TKgePysJxr0

o It uses light sensors to make sure that it stays on the defined path, and uses its ultrasonic sensors to find the fastest path to the bottle at an optimal angle.

 Sparki uses its RFID scanner to scan the pill bottle, making sure that the unique tag matches with the specified bottle number. If an incorrect bottle is approached, Sparki will beep, display a message that it is incorrect, and move back to the start to await more instructions.

Python Data visualization

https://git.io/v68ax

o Created a webpage using HTML, Python, and mySQL.

https://youtu.be/K5FWMMMd8d4

o Displays an animated Chloropeth map to visualize Carbon Dioxide Emmissions per state in the US over the past two decades.

 The states are color-coded according to the annual amount of emissions per state in million metric tons of carbon dioxide, and a cursor hover over a particular state will display a breakdown of that state's Carbon emissions per type in petroleum, coal, and gas.

Weather Data visualization

https://git.io/viN7J

 Created a webpage showing the weather across the United States. Used python to connect the API to the webpage and html for basic layout.

Android Inventory App

https://git.io/viOZW

• Created a inventory app using Android Studio with Java and XML. Displays image, price and quantity of the each item and calculates the overall amount of total items.

Rootfinding

https://git.io/viNQe

o Root-finding in python using newton's method and newton's method with line search. Used python's loops and tuple.

Battleship

https://git.io/viNQI

o Battleship is a simplified version of board game. The computer will hold the ships in the grid and the player will have to guess where those ships are. Used C++ classes, loops and different methodes.

Bag

https://git.io/viNQ0

 $\bullet \ \mathsf{Bag} \ \mathsf{of} \ \mathsf{array} \ \mathsf{and} \ \mathsf{lists}. \ \mathsf{Used} \ \mathsf{C}++ \ \mathsf{array}, \ \mathsf{single} \ \mathsf{and} \ \mathsf{double} \ \mathsf{linked} \ \mathsf{list} \ \mathsf{with} \ \mathsf{classes}, \ \mathsf{loops}, \ \mathsf{pointers}, \ \mathsf{and} \ \mathsf{different} \ \mathsf{methodes}.$

Stacks and queues

https://git.io/viNQA

o Created stacks and queues of array, single linklist and double linked list. Used C++ array, single and double linked list with classes, loops, pointers, and different methodes.

Extra Curricular

ALP(Applied Leadership Program), CLP(Core Leadership Program), Graphic Designing, Westminister Public Library (Volunteer in the computer class) 2014, CUWIC (Women in Computing)
